SUMMARY

Computer Science student dedicated to Software/AI engineering with a background in enterprise data integration and hands-on experience building production-grade AI systems, RAG pipelines, and automation tools. Proficient in Python, LLM orchestration frameworks, and Oracle data technologies, with a strong self-driven approach to learning and applying cutting-edge AI methods through personal projects and real applications. Fluent in five languages. Seeking an AI Engineering role where I can design, build, and ship intelligent systems that solve real-world problems.

EDUCATION

University of Buenos Aires (UBA)

In progress

Bachelor of Computer Science · Second Year

Self-studying: Machine Learning fundamentals, AI concepts to leverage into real world applications

San Antonio de Padua High School, Merlo, Buenos Aires

2015 – 2023

Specialization in Science

EXPERIENCE

Apply Latam, CABA, Buenos Aires

2024 – 2025

INTERNSHIP

- Member of the enterprise technical support team providing assistance on Oracle Enterprise On premise Services
- Resolved technical issues related to service fundamentals, reducing client downtime through structured troubleshooting
- Managed server maintenance tasks for multiple clients, ensuring Oracle applications well functioning
- Automated scheduled maintenance tasks for on-premise servers via batch/python scripting

ORACLE DATA INTEGRATION DEVELOPER

2025 – Present

- Designed, developed, and maintained end-to-end data integration pipelines to support enterprise data flows across systems
- Leveraged Groovy scripting to implement advanced transformation logic, custom event handlers, and dynamic workflow automation within Oracle Data Integrator
- Utilized Jython scripting to extend platform capabilities, automate repetitive operational tasks, and orchestrate complex integration scenarios
- Collaborated with cross-functional teams to gather requirements, model data mappings, and deliver robust integration solutions aligned with business objectives

PROJECTS

llm-academic-wiki · Open source, 2026

- Built an LLM-powered academic knowledge base adapted for university study, following Andrej Karpathy's LLM Wiki pattern.
 - Ingested 51+ PDFs (LaTeX lectures, exercise guides, photographed exams via vision) using Claude Code to compile a structured, cross-referenced Obsidian wiki.
 - Implemented custom slash commands for querying, exam simulation, and study optimization.
- Tech Stack: *Claude Code · Obsidian · pdftotext (poppler) · Claude Vision · Git*

llm-server · Personal project, 2026

- Deployed a self-hosted LLM inference server running Qwen3-8B on consumer GPU hardware via llama.cpp with a Vulkan backend.
 - Exposed the server through a public API with Cloudflare tunneling, Nginx authentication, and an automated gaming-mode gate.
- Tech Stack: *llama.cpp · Vulkan · Nginx · Cloudflare · PowerShell · Windows Services*

VoiceFlow · Open source, 2026 · github.com/neonunez/voiceflow

- Engineered a cross-platform (macOS and Windows) menu bar dictation app allowing users to press a hotkey to automatically type AI-polished text at the cursor.
 - Integrated pluggable transcription and LLM cleanup providers, building the app as a self-hostable alternative to Wispr Flow.
- Tech Stack: *Python · Svelte · PyObjc · pywebview · SQLite · Gemini · Grok*

better experience knowing me here ;) neo-nunez.vercel.app

Enterprise RAG System · Proprietary, 2025

- Developed a POC for a production-grade RAG system targeting employee onboarding, supporting Spanish-speaking users and integrating Oracle EPM documentation.
- Delivered cited answers, PDF source highlighting, and robust cross-lingual retrieval functionality.

Tech Stack: *Next.js · FastAPI · LangGraph · Docling · Supabase · Gemini Flash*

TECHNICAL SKILLS

Languages:	Python, JavaScript, Groovy, Jython, Java, SQL, HTML, CSS
AI / ML:	LangGraph, Langsmith, LlamaIndex, RAG systems, LLM orchestration, Gemini, Ollama, mlx-whisper
Frameworks:	FastAPI, Next.js, React Native (Expo)
Data & Integration:	Oracle ODI, ETL/ELT pipeline design, Supabase, data warehousing
Tools & Infra:	Git, Docker, Cursor, Google Workspace, AI productivity tooling
AI Concepts:	Skills, MCP, CLI, Harnesses, Window Context, Vector databases, prompt engineering, context engineering
Currently learning:	ML fundamentals, fine-tuning, reinforcement learning basics, cloud services, further devops

LANGUAGE CAPABILITIES

Spanish	Native – –
English	C1 – First Certificate – Cambridge Institute
French	B2 – Alliance Française
German	B2 – Goethe Institut
Italian	B1 – Instituto Dante Alighieri
Portuguese	A2– Currently Self-Teaching

INTERESTS

AI engineering & agent systems · software architecture · language learning & linguistics · personal productivity systems · personal finance & economics · open-source tooling & discovering · innovative papers & research · football · movies
